Career Objectives

Computer Science & Engineering (AI & ML) undergraduate seeking to build a career in AI/ML engineering, machine learning, and data science. Interested in programming, data structures and algorithms, and developing practical software and AI-based projects.

Skills

- **Languages**: C, C++, JavaScript, Python
- **Technologies**: HTML, CSS, Javascript
- **Databases/Tools**: MySQL, MongoDB, Git, GitHub, Figma
- **Soft Skills**: Problem solving, Team collaboration, Time management, Adaptability
- **Core CS:** Data Structures & Algorithms, DBMS, Software Engineering
- **AI/ML:** Machine Learning fundamentals, Computer Vision, NLP, Neural Networks

Projects

- **FarmSense — Smart Agriculture Monitoring System**: | **Github** November 2025
  - Developed a web-based smart agriculture monitoring dashboard using **HTML, CSS, and JavaScript.**
  - Implemented interactive monitoring of soil moisture, temperature, weather, and crop health parameters.
  - Designed a responsive and user-friendly interface to present agricultural data clearly.
  - Integrated simulated sensor data to demonstrate **data-driven farming and crop monitoring**.
  - Organized project assets and frontend components for **easy maintenance and scalability**.

- **AI-Based Student Performance Predictor: | Vercel** August 2026
  - Built a machine learning application to predict students' final academic scores using study hours, attendance, previous scores, assignments, sleep, and participation.
  - Trained a Random Forest regression model with Python and Scikit-learn to identify patterns influencing academic performance.
  - Connected the trained model with a Flask-based web interface for real-time predictions.
  - Added input validation and performance classification to present clear and user-friendly results.

- **Water Tank Monitoring System With Auto Pump Switch**: November 2025
  - Engineered and simulated an automatic water-level monitoring system using **Proteus and Arduino**.
  - Programmed the Arduino in **C** language to monitor water levels and control the pump automatically.
  - Configured sensor-based logic to detect different water levels and trigger appropriate pump actions.
  - Applied **embedded programming, circuit design and automation concepts** to develop the system.
  - Verified the system under different water-level conditions to ensure reliable and automatic pump operation.

Certificates

- Hackathon certificate by Inferno | Inferno — November 2025
- Building with Artificial Intelligence by Saylor's Academy | Saylor — February 2026

Education

Lovely Professional University — Phagwara, Punjab
- *Bachelor of Technology - Computer Science and Engineering;* ***CGPA: 7.94*** — *Aug 2025 - Present*

- **Kendriya Vidyalaya No. 2** — Jammu, J&K
  Higher Secondary Education; ***Percentage: 73.2 %*** — *May 2023 - May 2025*

- **Kendriya Vidyalaya No. 2** — Jammu, J&K
  Secondary Education; ***Percentage: 83 %*** — *April 2022 - May 2023*
